

Cigarettes are Fire Hazards

People are being careless around flammable gas stations and are putting not only their own lives in danger but the people around them as well. I am telling this story because I have seen a couple of houses blow up because of a gas leak. Just one little spark is all it takes then the next thing you know your friend/family are gone. I'm just one voice who is trying to be heard, pointing out to the people who do smoke to be more aware of there surroundings.

I'm trying to prevent tragedies and death.
